MESSAGE FROM THE DEAN

I am pleased to share with you our annual publication of IMPACT: A Research Bulletin. Now in its third year, IMPACT aims to publicize our research within the broader academic and business communities and demonstrate the impactful and high-quality research that is being undertaken at Memorial’s Faculty of Business Administration.

The past year has been challenging for everyone. Most industries have been affected in some way by the global Covid-19 pandemic, and the academic world likewise saw – and continues to see – massive shifts. We have been forced to pivot quickly, to confront our established practices and beliefs, and to search for new and innovative ways to meet the needs of our students, staff and faculty members. Several faculty were also affected by unplanned interruptions to their research work or forced to consider whether their research could even move forward.

I am so proud to report that we have risen to meet these unexpected challenges. While it has been a difficult time, it has also been an exciting one in which we discovered new efficiencies in the ways we conduct research, innovative avenues through which to share our research results and creative directions for further investigation. The world is full of questions and challenges to be explored, and our researchers continually strive to do so, delving deep to broaden our understanding of the solutions.

Although many things have changed in the business and academic worlds as a result of the Covid-19 pandemic, one thing that has not changed is our resolve. We at the Faculty of Business Administration are committed to our strategic priorities, and we are steadfast in our dedication to high quality, inclusive and impactful research that is relevant to our province, our country and the world.

We are also committed to building an equitable and inclusive educational and research ecosystem that encourages innovation, educates through experience and builds strong, lasting networks through external partnerships. This includes supporting Memorial’s Strategic Framework for Indigenization through our teaching and research activities, and we look forward to engaging with Indigenous peoples in meaningful ways in the years to come.

We believe that business can be a force for good, and we endeavour to exemplify that good through our leadership in business management education and research.

Sincerely,

Isabelle Dostaler, PhD
Dean, Faculty of Business Administration
Dr. Jianyun (J.Y.) Tang has been studying the dichotomous views of dominant leaders for over a decade.

Typically, dominant leaders are viewed as either heroes or villains. Dr. Tang, an associate professor of strategy, has been trying to make sense of these opposing views and figure out the respective conditions under which they tend to be heroes or villains.

His work was recognized with the 2021 Faculty of Business Administration Advisory Board Research Impact Award, which honours research that has impact on teaching, practice or policy. The winner is chosen by members of the faculty’s advisory board.

“I’m really glad a practitioner audience seemed to appreciate the value of this research,” said Dr. Tang.

In his practitioner-targeted paper, Dominant leaders: Heroes or villains?, Dr. Tang explains that dominant leaders are not intrinsically good or bad; rather, with their dominant power relative to their colleagues in management teams, dominant leaders are more apt to make unilateral decisions and thus tend to produce extreme results, usually either big wins or big losses.

His research, Dr. Tang says, is really about power dynamics and enhancing the understanding of healthy, effective workplace relationships.

“Leadership is essentially about social relations, and power relations is a very important dimension of that,” he said. “So I feel that by enhancing our understanding of leadership, and especially how that relationship works, we are better positioned to develop a more healthy and effective leadership as well as followership.”

Dr. Tang’s paper, which was co-authored by Dr. Mary Crossan and Dr. W. Glenn Rowe, both of Western University, was published in Organizational Dynamics in 2019.

The paper also highlights factors that may enhance the likelihood of dominant leaders having big wins versus big losses, finding that institutional checks and balances and individual self-discipline in exercising power are important.

Dr. Tang says that external power-balancing bodies, such as boards of directors, should also be vigilant in scrutinizing decisions and strategic proposals by dominant leaders, and that those responsible for appointing organizational leadership should be cautious about hiring leaders with the hopes they will save a company – an idea he says seems to be a myth.

Dr. Tang hopes his research will help business and societal leaders have a more realistic view of leadership and the impact dominant leaders may have on an organization.

“Knowledge is power. When people have a good understanding of something important, they are able to operate more effectively.”
Dr. Ashrafee Hossain secured a Social Sciences and Humanities Research Council Insight Development Grant for his project, Corporate diversity and role of political corruption.

Together with co-investigator Dr. Lawrence Kryzanowski of Concordia University, Dr. Hossain will work to complete two separate yet interrelated studies. Each study will be interdisciplinary, bridging the gap between areas such as financial economics, political science and sociology.

Dr. Hossain says that corruption, gender diversity and social responsibility are three of the most important topics of our generation. The researchers plan to study these topics holistically by looking at how gender diversity in corporate boardrooms relates to politically corrupt environments. They’ll achieve this by examining the relationship between politically corrupt environments and gender diversity at the corporate board level while controlling for other types of diversity and between politically corrupt environments and corporate social responsibility (CSR).

Over the past number of years, there has been an increased focus on gender diversity in boardrooms. While some countries have mandated quotas for including women on boards, there has been no consensus on the benefits of this inclusion. Similarly, there has been an increased focus on CSR. However, some people argue that this focus is somewhat of a façade.

Given the increased focus on gender diversity and CSR, the researchers believe that the results of this study will have valuable impact for both academic scholars and practitioners in identifying the roots and impact of political corruption.

As the Covid-19 pandemic disrupted business as usual across the globe, it also provided opportunities for faculty members to share their expertise in new contexts.

At the Faculty of Business Administration, some faculty members began to share their knowledge in the media to help leaders, workplaces and workers adjust to a new reality.

Dr. Kara Arnold explored the impact of the pandemic on the mental health of workplace leaders and how a transformational leadership style can help employees during times of crisis. She co-authored a piece for The Conversation Canada highlighting the ways in which universities are being put to the test by the pandemic, and spoke to Global News about how working from home is affecting employee well-being.

Dr. Alyson Byrne’s research on female breadwinners in high-status jobs was interrupted by the pandemic but, as she experienced the reality of working from home with two small children, she pivoted to start a new project. It focuses on heterosexual couples where at least one partner was forced to work remotely from home as a result of the pandemic, and the resulting impact on their work and relationship experiences. Dr. Byrne discussed this research in several media outlets including Bloomberg, Wall Street Journal, CBC Radio and Women of Influence.ca. She was also mentioned by Dr. Vianne Timmons, president of Memorial University, in a CBC article about women at the front lines of the pandemic.

For Dr. Gordon Cooke, who researches the working conditions of non-standard work and workers, the pandemic accentuated the disparity of working conditions among different types of front line employees. In December, he spoke to CBC about the differences in pay, benefits and workload between retail workers and Canada Post staff at retail postal outlets.

Dr. Tom Cooper spoke to Saltwire.com about the impact of Covid-19 on the business community in Newfoundland and Labrador, offering four strategies that businesses can use to adapt during the crisis. The Saltwire chain includes a number of regional publications including The Telegram and The Chronicle Herald.

The airline industry was particularly hard-hit by Covid-19, providing Dr. Isabelle Dostaler with several opportunities to share her insight with media across the country. She wrote an article about the effect of regional route cancellations on remote communities for The Conversation Canada and spoke to CBC and several other outlets about the impact of the pandemic on air transport in Atlantic Canada, other provinces and around the world.

Social media expert Prof. Lyle Wetsch spoke about the plethora of misinformation available on social media and how users may wade through the barrage of information to determine what’s factual and most up-to-date for Saltwire.com.

In January, I went to New York to be with my fiancée, Beth, while we planned our March wedding. In early February, she and I both contracted what could only be Covid. We spent more than three weeks with persistent fevers, head and body aches, severe breathing difficulties and cytokine storms inflaming knees, elbows and finger joints. No formal diagnosis was possible because New York had no testing in place. We stayed away from hospitals, already overloaded with cases, to avoid incurring additional viral loads.

In early March, it seemed we were fully recovered so we proceeded with our plans for a small, outdoor wedding on the Oregon Coast. Within a week of our return to New York, we were both struck with Covid again. For about three weeks we suffered similar symptoms as before with the added benefit of losing the ability to smell. When the Canadian border reopened on June 21, we packed up all Beth’s belongings and drove to Newfoundland. Throughout the rest of the year, I have suffered occasional setbacks associated with long-Covid, mostly day-long bouts of gastrointestinal pain, headaches, fatigue and/or fevers.

Like everyone in the pandemic, I’ve worked as I could. My field research halted but, as an ethnographer living in the village that contains my research site, I was able to include the research partners in a small, social bubble and observe how the social enterprise (SE) deals with a pandemic.

I co-authored a paper with a former PhD student and submitted it to Journal of Consumer Research (FT50), earning a revise-and-resubmit decision. The piece focuses on social innovation in the context of a German SE called Familyship, which offers an online platform to assist people (especially LGBTQ+ and other marginalized people) in creating and supporting alternative families. I began working with Beth on a paper related to our SSHRC Partnership Development Grant that examines the SE as a broker of identity resources for people with fragile or transitional identities. It will be included in a special issue of Sustainability, which we are co-editing, on SE and community well-being.

I formed a collaboration with a French marketing scholar to produce French and English versions of a textbook on marketing for sustainable business. I had accepted for publication the first collection of my poetry, titled Evenings When the Sun, which I will sell, in conjunction with public readings, to raise funds for the SE partner at the heart of my SSHRC-funded ethnographic research.

On the teaching front, I converted two courses, a Qualitative Research Methods module (PhD/M.Sc.) and Marketing for Sustainability (MBA) to asynchronous online learning, and I prepped and taught for the first time (also asynchronously) the course Introduction to Social Enterprise, Innovation and Entrepreneurship in the MBA-SEE program.

I did a keynote presentation about SE opportunities for people in retirement for a Transitions to Retirement conference at George Mason University. I graduated my final non-Memorial PhD student and saw her placed in a tenure-track position at the University of Southern Denmark; I continued supervision of two Memorial PhD students in SE (both passed comprehensive exams) and recruited two new PhD students to the program; I began co-supervising a new interdisciplinary PhD student with a SE theme; and I began supervising a MITACS-funded project on textile reuse enterprises in Atlantic Canada. If I’ve forgotten anything, I blame it on Covid.
Dr. Sherrie Komiak, working with Dr. Paul Komiak and recent PhD graduate, Dr. Vania Yuxi Shi, has proposed a conceptual framework of useful virtual health-care information technologies (HIT) in the context of long-term care for seniors and improving their health-related quality of life.

In their article, Enhancing seniors’ health-related quality of life: Designing a framework of virtual health-care information technologies, published in the International Journal of Research in Business and Social Science, two research questions are explored: what kind of virtual HIT are useful for seniors, and how do HIT affect senior citizens’ health-related quality of life?

After an extensive literature review on aging, HIT for seniors and senior citizens’ health-related quality of life, the authors built their framework based on task-technology fit theory, which suggests information technology (IT) is more likely to have a positive impact on positive performance and be used if the capabilities of the IT match the tasks the user must perform.

The framework proposes there are number of human characteristics that will affect a senior’s health-related task adaptability, autonomy and interdependence, and those factors must be considered, along with the health system requirements, to ensure the best fit of task to technology.

The authors propose that for specific senior citizens with one or more age-related losses, health systems should be designed specifically to reduce the negative impact of such losses on senior citizens’ health-related quality of life. Health information systems that are designed with features that shorten a senior’s effort and time requirement, such as telecare availability, personalization, self-organizing availability, peer support functions and collaborative technology, are more efficient and effective than those systems that don’t provide access to high-quality health assistance for senior citizens.

The proposed framework provides a basis for future research on how to use technologies to continue to improve seniors’ ability to access and utilize virtual HIT.

The Covid-19 pandemic has increased the use of virtual HIT systems across the world. Dr. Komiak and her team say the health-care system may never return to a fully face-to-face dominant model as virtual HIT presents long-term opportunities to reduce health costs by facilitating adults’ ability to age-in-place in more familiar, less restrictive and less expensive environments.
REPORT FROM THE CHAIR: DR. JEFFREY PITTMAN

My research program primarily focuses on analyzing the role that corporate governance structures play in shaping economic outcomes.

In 2020, I published four papers in major journals including Contemporary Accounting Research and Accounting, Organizations and Society. Additionally, I had five papers accepted for publication in The Accounting Review and Contemporary Accounting Research this year. I continue to focus intently on my own research projects as well as helping to develop the next generation of accounting scholars through teaching graduate students and mentoring newer faculty.

Several of my recent co-authored projects rely on exogenous shocks to improve identification. For example, in a quasi-natural experiment, we exploit the introduction of new airline routes that shorten the travel time between audit firms’ national and practice offices as an exogenous shock to isolate whether the stricter monitoring at the national level stemming from closer proximity leads to improvements to practice offices’ capacity and expertise.

Another project examines whether executives issue more upwardly biased earnings forecasts when they experience better moods, evident in their sunshine exposure shortly before making the forecast. In the coming year, I plan on continuing to work on these and other projects with several under revision at such top outlets as The Accounting Review, the Journal of Accounting and Economics, the Journal of Accounting Research, Management Science and Contemporary Accounting Research. Similar to my earlier research, I hope that these papers will help shape research and public policy debates in the years ahead.

Apart from my own research activities, I continue to serve as deputy editor-in-chief of Contemporary Accounting Research. Besides refereeing submissions to several major journals, I contribute to my discipline by serving as a faculty leader at doctoral consortia and as a keynote speaker at conferences.

CORPORATE GOVERNANCE AND TRANSPARENCY

HIGHLIGHT: DR. CHANSOO PARK

Dr. Chansoo Park successfully obtained a Social Sciences and Humanities Research Council Insight Grant for his project, The dance of (effective) give and take: Disseminative capacities and its effects on reverse knowledge transfer in international joint ventures (IJVs).

The process of inter-firm knowledge transfer in IJVs, especially across national boundaries, can often be complex and ineffective since knowledge transfer is dependent not only on recipients’ absorptive capacity but also on senders’ attitudes, behaviours and ability to communicate knowledge. The limited literature on senders’ capacity to transfer knowledge in a comprehensible fashion suggests that this concept of disseminative capacity is still largely a black box. This will be the first study to develop and test a comprehensive model of the roles of two disseminative capacities (initial and reflective) in the transfer of knowledge between IJVs and their parents.

Working with collaborators Dr. Andrew Delios, National University of Singapore, Dr. Dana Minbaeva, Copenhagen Business School and Dr. Ilan Vertinsky, University of British Columbia, Dr. Park will investigate the impact of the dissemination capacities on knowledge transfers and innovation outcomes.

The project seeks to expand the dimensions of the disseminative capacity concept and assess its impact by developing and testing an integrated, sequential stage flow model. Dr. Park expects the research will stimulate further research related to knowledge dissemination and address gaps in the literature, offering a more complete framework for understanding the process of organizational learning that includes the perspective of the teacher in the knowledge transfer and learning process.

Dr. Chansoo Park successfully obtained a Social Sciences and Humanities Research Council Insight Grant for his project, The dance of (effective) give and take: Disseminative capacities and its effects on reverse knowledge transfer in international joint ventures (IJVs).

MONOGRAPHS

**PEER-REVIEWED JOURNALS**

Dr. Mary Furey’s paper, What’s slowly cooking in the pressure cooker? Safety culture contradictions in Atlantic Canada’s offshore oil sector, uses a case study of the 1982 Ocean Ranger oil rig disaster to examine the role that safety culture played in the disaster and its role in the modern offshore oil sector.

The research for this case study was comprised of semi-structured interviews with 37 oil rig employees ranging from managers to workers on the rig and marine vessels servicing the rig, and a documentary review of the four volumes of transcripts from the Royal Commission on the Ocean Ranger Disaster (RCORD) conducted in 1983-1984. The paper was co-authored by Dr. Daphne Rixon (St. Mary’s University) and published in the Journal of Management Policy and Practice.

Their research uncovered a paradox with opinions divided regarding the current safety culture in Atlantic Canada’s offshore oil sector. While on the surface, it appears there’s considerably more attention to safety since the sinking of the Ocean Ranger, many workers still perceive the oil sector’s focus on safety as superficial.

While the research reveals both positive and negative elements of safety culture, the authors stress it’s essential that safety culture not be considered in isolation but in the context of national culture, industrial sector culture and organizational culture. It’s essential that improvements to the industrial sector level perception of safety be made, and that for true organizational culture change, a deep commitment to safety by senior management is required along with mechanisms to hold management accountable.

ENGAGING IDEAS SERIES

The Faculty of Business Administration’s research and industry engagement series, Engaging Ideas, aims to: increase community and industry awareness of research conducted by faculty members; transfer this knowledge so that industry can apply it in its activities; and facilitate future research collaborations.

These interactive presentations provide a forum for discussion between industry representatives and faculty members on the practical uses and implications of the exciting research being conducted in our faculty and at Memorial University.

This year’s event was part of Memorial University’s Research Week, and the theme was Exploring Newfoundland and Labrador’s Cultural Economy. Presentation topics and speakers included:

• The NSO: An anchor for instrumental musicians: Hugh Donnan, chief executive officer, Newfoundland Symphony Orchestra;

• An investment with a guaranteed return: Amy House, business manager, N.L. Directors Guild of Canada; and

• Peter’s puppies: Managerial autocracy and employee relations: Dr. Alex Stewart, Chair of Entrepreneurship, Memorial University and Dr. David Krackhardt, professor, Carnegie Mellon University.
In terms of teaching in 2020, I created an innovative version the capstone entrepreneurship course for the master of business administration in social enterprise and entrepreneurship (MBA-SEE) program. In my opinion, its variant of the business model canvas is more attuned to both startups and to social ventures than others. My use of art in the course, and in my other new venture courses, helps unleash creativity that students often believe they lack.

I am continuing to advise a startup enterprise, first modelled in my graduate new ventures class and which was a Mel Woodward Cup winner. It has global potential.

I had one article accepted in 2020 and is forthcoming in 2021. This is titled, Who shuns entrepreneurship journals? Why? And what should we do about it? in *Small Business Economics*. This paper has also been accepted for the entrepreneurship division of the Academy of Management conference.

I was also a co-investigator on a grant awarded from the Ocean Frontiers Institute: Future ocean and coastal infrastructures.

In 2020, I served as a mentor for a doctoral student as part of the Academy of Management entrepreneurship division’s ENT e-Encounters program. I was a member of the task force for a major revision to the undergraduate programs, the recruiting committee for positions in supply chain management, and the promotion and tenure committee at the Faculty of Business Administration. I was a judge for both the Centre for Social Enterprise Social Ventures Incubator and the Memorial Centre for Entrepreneurship’s entrepreneurial work term program. I was a member of the Memorial University Innovation Committee. I also served on the editorial board of *Family Business Review* and *Journal of Family Business Strategy*.

At the faculty’s Engaging Ideas series, I gave a presentation on venturing work in Bonavista. As a result of this, I received a request to give a similar presentation to the senior management team of Suncor.
Dr. Jeffrey Parsons successfully earned funding grants from two national agencies in 2020.

He received a Discovery Grant from the Natural Sciences and Engineering Research Council of Canada (NSERC) for a project titled, A design theory for observational crowdsourcing.

He is also principal investigator on a grant from the Social Sciences and Research Council (SSHRC) with PhD graduate Dr. Roman Lukyanenko, now an associate professor at HEC Montréal. Their project is titled Gig data: Understanding data repurposing and designing for repurposability.

This is the second time that Dr. Parsons has been successful in grant applications from both NSERC and SSHRC in the same year.

Dr. Parsons’ NSERC project proposes to develop and test a design theory for observational crowdsourcing, which will be used to develop a new platform for observational crowdsourcing projects. He expects this platform will allow for more accurate and diverse data to be collected.

In the SSHRC project, the researchers will focus on identifying the characteristics of crowdsourced data that promote its reuse, since organizations are increasingly using crowdsourcing to support better decision-making. Dr. Parsons and Dr. Lukyanenko plan a three-phase project that will develop measures of repurposability, identify data characteristics that promote repurposing, and propose and evaluate principles to generate this type of data. They plan to evaluate these principles using data collected from real-world crowdsourcing platforms.
